L8 ANSWER 17 OF 23 CA COPYRIGHT 2002 ACS

AB ***Seed*** -specific gene expression cassettes which can be used for manufg. proteins with plants are described. The cassette comprises (1) a promoter of the phaseolin (P) gene, the .alpha.' subunit of .beta.-conglycinin (C) gene, or the .beta.-zein (Z) gene; (2) a translation initiation signal from the P, C, Z, or an animal gene; (3) a gene selected from an animal gene or the brazil nut 2S storage protein; and (4) a poly A signal from an animal gene or the P gene. The regulatory region is flanked by restriction sites to allow exchange of regulatory regions. An expression cassette contg. the P gene regulatory region and bovine ***somatotropin*** cDNA was prepd. Transgenic tobacco plants contg. this expression cassette were produced using std. methods. ***Somatotropin*** was found in the protein storage bodies of the ***seeds*** from these plants.

L8 ANSWER 21 OF 23 CA COPYRIGHT 2002 ACS

AB Plant cells are transformed with DNA by soaking grain, spores, or excised embryos, which have been dried to <10 wt.% water, in a soln. contg. the DNA. Peeled grain of Hordeum vulgare was sterilized with Na hypochlorite and dried to <5 wt.% water. They were individually soaked with 150 .mu.L soln. contg. pc hGH 800, a vector encoding human growth hormone, for 3 days. Plants were regenerated from these grains, the plant tissue was homogenized, and growth hormone was purified from the homogenate.
